AGS Stainless Introduces Elliptical Stainless Steel Hand Rail

Bainbridge Island, Wash. – Suitable for both commercial and residential applications, AGS Stainless, Inc. (www.AGSstainless.com) announces its new elliptical top rail option which is compatible with any AGS Stainless railing system. Continuing AGS Stainless' long history of innovative railing products, our new elliptical top rail offers additional safety through its easy-gripping surface profile while still offering an elegant look.

“The shape of our new top rail is naturally contoured to fit the human hand, so in addition to being beautiful it lends itself nicely to increased functionality,” explains Kevin Harris, Director of Sales & Marketing at AGS Stainless. “And now that baby boomers are growing older and wanting to continue living within their upscale, existing homes – incorporating design elements into the home that also improve accessibility is ideal for both indoor and outdoor railing applications.”

The new elliptically-shaped top rail has a 2-1/4" wide gripping area and is made of 100 percent stainless steel providing the railing system with both strength and ease of maintenance.

Best known for its Clearview® line of stainless steel railing systems, AGS Stainless is a company that prides itself on providing beautiful stainless steel railing systems that have long been well-revered throughout the industry. With AGS Stainless, the overall railing design and ordering process is straightforward and simple. First, sketches and approximate dimensions are submitted by the

prospective customer. Then, a member of the design team creates CAD (computer-aided design) drawings and details of the railing system. Finally, the custom railing system is fabricated to meet the high standards set by AGS. Throughout the entire process, an AGS railing expert works directly with the customer to ensure accurate product fabrication, prompt delivery and complete customer satisfaction.

About AGS Stainless: AGS Stainless manufactures stainless steel railing systems which are in demand all over the world. Their unique (and proprietary) way of manipulating dimensions provided by the customer allows them to fabricate custom railing configurations that rival anything built on-site. Cut with the precision of a computer-controlled laser and welded and polished by hand, each railing component reflects craftsmanship at its finest. The railing design options are as extensive as the production standards are high: round, flat and elliptical top rail; standard (36", 42") or custom post heights; cable, glass, bar or mesh panel infill with a myriad of end-fitting combinations; top or side mount post mounting methods, and more.
