Cascadia Railing System: An Elegant Stainless Steel Bar Rail System That Eliminates Design Time

AGS Stainless Set To Unveil Its Newest Railing Product at IBS 2020

Bainbridge Island, Wash. – AGS Stainless, Inc. (AGSstainless.com) proudly unveils its newest product offering at the International Builder Show (IBS) in Las Vegas, Jan 21-23.

Featured prominently on the Modern Home at Show Village, Cascadia is a stainless steel bar railing system that ships within 48-hours and installs with minimal field modification. Because the customer provides their own top rail, there is no need for AGS to design and fabricate it, which saves time and expense. Thus, Cascadia gives builders a high-end custom stainless railing product at a price point that's closer to aluminum and composite railing system products.

Kevin Harris, Director of Sales & Marketing for AGS says "Where a custom-made railing system might require a number of weeks to complete the entire design, approval and fabrication process, Cascadia railing components are pulled from inventory and ship within 48-hours. They can be installed quickly, by just about anyone."

Some features of Cascadia:

- stainless steel components are made of highly durable A316 marine-grade stainless
- design flexibility, as the system will accommodate a wide variety of top rail materials
- ICC-ES approval (ESR 4148) makes permitting a cinch
- ships within 48 hours

About AGS Stainless: AGS Stainless Inc., (AGS) has been creating metal railing systems of unmatched beauty and quality for three decades. Their innovative Clearview® line of railing systems allows clients to have a custom-designed, component-based railing system delivered to their door. Cascadia bears the same quality and craftsmanship that AGS is known for. For more information, visit: AGSstainless.com or call 888.842.9492.
