Cascadia Railing System Now at Cardinal Building Products

This Elegant Stainless Steel Bar Rail System Eliminates Design Time

BAINBRIDGE ISLAND, WA - 6/19/20 – AGS Stainless, Inc. (<https://cardinalbuildingproducts.com/ags-stainless-inc/>) the industry leader in high-quality stainless steel railing systems, is proud to announce a new partnership with Cardinal Building Products to distribute AGS' new Cascadia Railing System primarily in Pennsylvania, New Jersey, Maryland, Delaware, and Virginia.

Cascadia is a stainless steel bar rail system that installs with minimal field modification. Cascadia was designed to give builders a stainless railing product at a price closer to that of an aluminum railing system.

“Research indicates that homeowners are increasingly interested in higher-quality deck and stair railing products,” said Kevin Harris, Director of Sales and Marketing for AGS Stainless. “Prior to Cascadia, that often meant hiring a local metal fabricator. Currently, Cascadia is the only ICC ES-approved stainless steel bar rail system (Report #4148). This allows for immediate acceptance by the vast majority of building departments, eliminating the time-consuming review and approval process. So, where a typical stainless railing system might require a number of weeks to complete the entire design, permit, approval and fabrication and installation process; Cascadia railing system components are pulled from dealer inventory and they can be installed the very same day! Cascadia allows almost everyone to quickly and affordably add the durability and timeless beauty of stainless railing to their home.”

Rick Hess, General Manager for Cardinal, sums up the collaboration this way: “We’re excited to be able to bring this product to customers in mid-Atlantic region. Cascadia is a high-quality product that pairs well with our other product lines. Our customers are going to appreciate this system’s marine-grade

stainless steel components and its ease of installation, as well as simply having access to a stainless steel railing product that doesn't require custom design."

Some features of Cascadia:

- Components are made of highly durable A316 marine-grade stainless
- Design flexibility, as the system will accommodate a wide variety of top rail materials
- ICC-ES approval (ESR 4148) makes permitting a cinch

About AGS Stainless: AGS Stainless Inc., (AGS) has been creating metal railing systems of unmatched beauty and quality for more than three decades. Their innovative Clearview® line of railing systems allows clients to have a custom-designed, component-based railing system delivered to their door. Cascadia® bears the same quality and craftsmanship that AGS is known for. For more information, visit: www.AGSstainless.com or call 888.842.9492.

About Cardinal Building Products:

Cardinal Building Products is the premier choice for Mid-Atlantic specialty building product needs. The company has nearly one million square feet of vinyl, composite and polyethylene decking on site, and also offers vinyl and aluminum railing to complete any residential or commercial deck. They can easily deliver truckloads or skid lots of material to your store. <https://www.cardinalbuildingproducts.com>
